IMAGE AND VISION COMPUTING

Index to Volume 7
Numbers 1–4
Pages 1–312

1989

Subject index

Algorithm
– for estimating optic flow 57
– recognition algorithm 71
Arc detection 109
Association graphs 135

Behaviour
– visual 3

Chromosome classification 102
Contrast enhancement 205
Crack detection 268
Curve detection 31

Data fusion 144
Digital geometry 194

Feature representation 178

Geographic information system 173

Hexagonal arrays 194
Hough transform
– parallel implementation 167

Image
– analysis 268
– compression 246
– interpretation 50, 102
– processing 122, 151, 225, 274
– velocity field 259

Line
– detection 109
– images 225

Motion
– extraction 217
– specular 38
– tracking cataract motion 57

Object location 50
Object recognition
– polyhedral 71
– 3D 210, 295
Oversegmentation 135

Perspective inversion 17
Pyramids
– use of 129

Quadtrees
– compact 173

Region extraction 129

Sampling structure
– hexagonal 162
Scene labelling 178
Segmentation
– colour 144
– curve 109
Semi-parallel processing 122
Stereo matching 83, 95
Stereo vision correspondence 237
Surface
– reconstruction 10
– representation 115
Symmetry set 63

Terrain image matching 83
Three-dimensional scene representation
– from image sequences 24
– from outdoor image sequences 10
Truth maintenance system
– assumption-based 43

Vision
– animate 3
– model-based 43
– robot 115

Wave/diffusion process 63

Zisserman, A, Giblin, P and **Blake, A** The information available to a moving observer from specularities 38

Title index

3D wire-frame integration from image sequences 24

A cue generator for crack detection 268
A digital geometry for hexagonal pixels 194
A frame-based system for modelling and executing visual tasks 102
A Markov random field approach to data fusion and colour segmentation 144
An associative processor array for image processing 151
An edge preserved image compression technique 246
An object location strategy using shape and grey-level models 50
A robust algorithm for contrast enhancement by local histogram modification 205
A rule-based system for dimensional analysis of glass containers 274

Behavioural constraints on animate vision 3

Compact: a surface representation scheme 115
Consistent labelling of image features using an assumption-based truth maintenance system 43

Detecting and extracting compact textured regions using pyramids 129
Detecting partially occluded ellipses using the Hough transform 31
Digital elevation model production by stereo-matching spot image-pairs: a comparison of algorithms 95
Dynamic estimation of optical flow field using objective functions 259
Efficient parallel implementation of the Hough transform on a distributed memory system 167

Image processing for primitive image features recognition in the case of discontinuous line images of printed characters 225
Image processing by software parallel computation 122

Matching oversegmented 3D images to models using association graphs 135
Model based perspective inversion 17

Parallel imperative and functional approaches to visual scene labelling 178
Polyhedral object recognition with sparse data in SIMD processing mode 71

Recent progress in the recognition of objects from range data 295
Recognition of single 3D curved objects using 2D cross-sectional slice shapes 210
'Region-growing' algorithm for matching of terrain images 83

Segmentation of edges into lines and arcs 109
Space efficient hierarchical structures: relatively addressed compact quadtrees for GISs 173
Stereo vision correspondence using a multichannel graph matching technique 237
Surface reconstruction from outdoor image sequences 10

The design of hexagonal sampling structures for image digitization and their use with local operators 162
The hybrid constraint equation for motion extraction 217
The information available to a moving observer from specularities 38
Tracking cataract by the 'four-line' method 57

Using a mixed wave/diffusion process to elicit the symmetry set 63
